2. Students' answers may vary, but the point is to put the money to work for the owners by investing it in some way. For the most part, it will be idle if it sits in the checking account. The Carloses could withdraw more money for themselves. They could invest it in new or upgraded equipment. If they wanted ready access to it and had a low risk tolerance, they could invest in short-term certificates of deposit; on the other hand, if they had a higher risk tolerance, they could invest the surplus in stocks. This option should be exercised with caution, as there are no guarantees that their investment will pay off.
